

COVER LETTER

Pradnesh Rajeev Mohite | Senior Software Engineer • Healthcare Data Engineering

Dear Hiring Manager,

I am a Senior Software Engineer with extensive experience in healthcare technology, data engineering, SQL, ETL, and healthcare data workflows. I specialize in solving complex data and application challenges, improving data quality and system performance, and building reliable solutions for healthcare environments where accuracy, scalability, and operational reliability are essential.

In my current role at MRO Corp, I work on clinical data mining and healthcare data extraction across more than 50 healthcare practices. My work includes developing and optimizing T-SQL, troubleshooting data extraction and schema issues, refining database queries, and supporting reliable ETL processes. I have contributed to a 40% reduction in average query response times and resolved more than 200 complex data extraction and schema-related issues, achieving an 85% first-contact resolution rate.

I have also worked on scaling ETL pipelines to support more than 100 distributed healthcare practices and on healthcare data and interoperability workflows involving EMR/EHR systems. These experiences have given me a strong understanding of the healthcare data lifecycle—from extraction and transformation through validation, troubleshooting, optimization, and delivery.

Earlier in my career at Allscripts LLP, I developed a strong foundation in relational databases, schema design, performance tuning, application support, and SLA-driven technical environments. My progression through multiple roles and recognition through client appreciation awards reflect my ability to investigate complex problems, collaborate with stakeholders, and deliver dependable technical solutions.

I am now looking to bring this combination of healthcare domain knowledge, SQL and ETL expertise, data problem-solving ability, and software engineering experience to an organization where I can contribute to meaningful data and technology initiatives. I am particularly interested in opportunities across healthcare data engineering, data analytics, healthcare IT, and related data-focused roles.

Thank you for taking the time to review my profile. I would welcome the opportunity to discuss how my experience can contribute to your team and help build reliable, high-quality healthcare data solutions.

Sincerely,

Pradnesh Rajeev Mohite
